

FABRIZONETM

cleaning professionals

The clean up on Grand Cayman is in full swing! At this time it is **vitaly** important that clean up efforts be undertaken by trained professionals. The bacteria residue and moulds caused by contaminated water pose extreme health concerns if not addressed by a professional. **Moulds/Mildew/Bacteria** pose a dangerous health hazard at this time, especially for infants/children, the elderly and those with asthma, allergies or other respiratory illnesses. Mould spores are very small and can easily be breathed deeply into the lungs. Moulds are most likely to develop in areas that have not been adequately sanitized or dried following the storm, particularly areas that remained closed up for longer than 2 days after the hurricane. Moulds can usually be detected by a musty odour and discolouration of surfaces, but can be present without visual detection. Bacterial residue can remain deep within porous surfaces even after they have been cleaned with bleach or other grocery store cleaning products.

Use caution when choosing a Professional Cleaning Company.

Ensure the company you choose will complete a 3 stage post-disaster restoration.

Professional Inspection: Any credible cleaning company should be able to quickly assess the needs of your home and business, detecting the growth of mould and bacterial residue, not only in carpets and upholstery but also in sheet rock, insulation, wood, as well as porous flooring material such as ceramic tile and marble.

Recommendations: They should provide you with professional cleaning/restoration recommendations specific to the nature and extent of damage. This may include a recommendation to destroy material damaged beyond safe restoration. It is recommended that all homes be treated for mould spores once contaminated sheet rock has been removed. This will ensure that mold spores do not grow behind newly installed sheet rock.

Restoration Completion: All reputable cleaning companies should have access to professional grade disinfecting/sanitizing products, designed to kill disease causing bacteria and moulds, as well as equipment to safely clean and dry your home or office limiting the re-growth of molds.

The FabriZone Franchise Network has been handling flood and disaster restoration worldwide for over 20 years! We have the experience to restore safely and professionally. We are trained in the right procedures and have the back up of an international technical support centre.

We are 100% Caymanian owned and fully committed to seeing our country safely restored.

Please call 925-3801 or 916-2067 if you require professional cleaning assistance.
